A;Note: sequence extracted from NCBI backbone (NCBIP:109438) C;Comment: Advanced glycosylation end products are heterogeneous nonenzymatically glycellular function, thus contributing to tissue lesions in diabetes. C;Comment: This receptor appears also to mediate the effects of amyloid beta peptide ates in the neurotoxic pathway that produces dementia in Alzheimer's disease.

CELL ADHESION MOLECULE WITH AN IMPORTANT ROLE IN THE DEVELOPMENT OF THE NERVOUS SYSTEM. INVOLVED IN NEURON-NEURON

CHAPTESION, NEURITE FASCICULATION, OUTGROWTH OF NEURITES, ETC. BINDS

CONTROL ON NEURONS:

TO AXONIN ON NEURONS: TYPE I MEMBRANE PROTEIN.

CHIEFERNATIVE PRODUCTS: TWO ISOFORMS IN THE CYTOPLASMIC REGION ARE PRODUCED BY DIFFERENTIAL SPLICING.

CHAPTERNATIVE PRODUCTS: TWO ISOFORMS IN THE CYTOPLASMIC REGION ARE PRODUCED BY DIFFERENTIAL SPLICING.

CHAPTERNATIVE PRODUCTS: TWO ISOFORMS OF THREE X-LINKED SYNDROMES. 1: HYDROCEPHALUS OWING TO STENOSIS OF THE AQUEDUCT OF SYLVIUS (HSAS) CHARACTERIZED BY MENTAL RETARDATION AND BULARGED BY BRAIN VENTRICLES. 2: MASA SYNDROME WHICH IS CHARACTERIZED BY MENTAL RETARDATION, APHASIA, SHUFFLING GAIT, AND ADDUCTED THUMBS. HAS AN OVERLAPPING PROPILE OF CLINICAL SIGNS WITH HSAS, BUT WITH A MILDER PRESENTATION AND A LONGER LIFE EXPECTANCY. 3: SPASTIC PARAPLECIA TYPE 1 (SPG1), COLLECTIVELY THESE SYNDROMES ARE ALSO KNOWN AS CRASH SYNDROME, AN ACCOMYM WHICH STANDS FOR CORPUS CALLOSUM HYPOPLASIA, AND HYDROCEPHALUS.
                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN. ALSO SECRETED. ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AN SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.
SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: FOUND IN MAMMARY GLAND, JEJUNH, LUNG, KIDNEY AND SMALL INTESTINE.
FIN: IN THE ABSENCE OF DIMERIC IGA, SER-727 IS PHOSPHORYLATEI WHICH ALLOWS PIGR TO FUNCTION NORMALLY.
SIMILARITY: CONTAINS 5 IMMUNOGLOBULIN-LIKE V-TYPE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BASOLATERAL SURFACE OF EPITHELIAL TRANSPORTED ACROSS THE CELL TO BE DURING THIS PROCESS A CLEAVAGE OCC EXTRACELLULAR (KNOWN AS THE SECRET TRANSPERBRANC SEGMENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PF00047; ig;
